

J.B.INSTITUTE OF ENGINEERING AND TECHNOLOGY

(UGC
Accredited by NAAC & NBA, Approved by AICTE & Permanently Affiliated to JNTUH
AUTONOMOUS)

Organized by

TEAM DETAILS

- 1 Selected Track - DATA SECURITY & PRIVACY
- 2 Problem Statement Title – EXCESSIVE DATA SHARING
- 3 Team Name - HACKSPRINT
- 4 Team Lead - J.KESARI NANDAN
- 5 Dept. Name - CSDS

Edit with WPS Office

IDEA TITLE

Users are forced to share excessive personal data

-In today's digital age, constant sharing of personal information has become the norm, leading to significant privacy risks and increasing concerns about identity theft and data security

Edit with WPS Office

TECHNICAL APPROACH

- programming languages like: python, java script.
- AIML libraries:
tensor flow, scikit-learn
- Frontend: HTML
- Backend: node.js
- database: firebase/MYSQL

Edit with WPS Office

FEASIBILITY AND VIABILITY

- Feasibility :

- secure systems encryption, and data minimization methods can be reduce identity theft risk
- investing in data protection is cost effective compared to losses from data breaches

- viability :

- modern technology supports strong encryption and privacy tools, making it viable to protect user data effectively
- The cost of implementing data security measures is justified by the reduction in financial losses from identity theft

Edit with WPS Office

IMPACT AND BENEFITS

- IMPACT :

- Strengthening data protection builds confidence among users to safely use digital platforms
- limiting excessive data sharing minimizes the chances of personal information misuse

- . BENEFITS :

- Users personal data remains protected, reducing the risk of misuse or theft
- Strong data protection builds confidence and long term loyalty among users
